II. Sequence determination of the entire genome and assignment of potential protein-coding regions.",

    diphosphare.
    PATHWAY: NAD biosynthesis, aspartate to NaMN; third (last) step.
    SIMILARITY: BELONGS TO THE NADC/MODD FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pyridine nuclectide biosynthesis; Transferase; Glycosyltransferase; Complete proteome.

"Complete genomic sequence of Pasteurella mulcocida Pm70.";

Proc. Natl. Acad. Sci. U.S.A. 98:3460-3465 (2001).

-!- CATALYTIC ACTIVITY: Anthranilate + phosphoribosylpyrophosphate =

N-5'-phosphoribosyl-anthranilate + diphosphate.

-!- PATHMAY: Tryptophan biosynthesis; second step.

-!- SIMILARITY: BELONGS TO THE ANTHRANILATE PHOSPHORIBOSYLTRANSFERASE

Characterization of the Citrobacter freundii phoE gene and
Characterization of the Citrobacter freundii phoE gene and
evelopment of C. freundii-specific oligonuclectides.";
FEMS Microbiol. Lett. 78:199-204 (1992).
-!- FUNCTION: THIS IS ONE OF THE PROTEINS INDUCED WHEN CELLS ARE
GROWN UNDER PHOSPHATE LIMITATION. ITS ROTEIN PORE IS
PARTICULARLY EFFICIENT IN THE UPTAKE OF INORGANIC PHOSPHATE,
PHOSPHORYLATED COMPOUNDS, AND SOME OTHER NEGATIVELY CHARGED.

Science 281:375-388(1998).
Science 281:375-388(1998).
-!- FUNCTION: CELL WALL FORMATION (BY SIMILARITY).
-!- CATALYTIC ACTIVITY: UDP-N-acetylmuramate + NADP(+) = acetyl-3-O-(1-carboxyvinyl)-D-glucosamine + NADPH.
-!- COPACTOR: FAD (BY SIMILARITY).
-!- CATHWAY: Peptidoglycan biosynthesis.
-!- SUBCELLULAR LOCATION: Cytoplasmic (Probable).
-!- SIMILARITY: BELONGS TO THE MURB FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Fraser C.M., Norris S.J., Weinstock G.M., White O., Sutton G.G., Dodson R., Gwinn M., Hickey E.K., Clayton R., Ketchum K.A., Sodergren E., Hardham J.M., McLeodd M.P., Salzberg S., Peterson J., Khalak H., Richardson D., Howell J.K., Chidambaram M., Utterback T., McDonald L., Artiach P., Bowman C., Cotton M.D., Fujii C., Garland S.                                                                                                                                                                FUNCTION: BECESSARY FOR EFFICIENT EXPORT OF EXTRA-CYTOPLASMIC PROTEINS. BINDS TO THE SIGNAL SEQUENCE WHEN IT EMERGES FROM TRIBOSOMES (BY SIMILARITY).

SUBUNIT: SIGNAL RECOGNITION PARTICLE CONSISTS OF A 4.5 RNA MOLECULE AND PROTEIN FFH (BY SIMILARITY).

DOMAIN: THE PROTEIN HAS A TWO DOMAIN STRUCTURE: THE G-DOMAIN BINDS GTP; THE M-DOMAIN BINDS THE RNA AND ALSO BINDS THE SIGN SEQUENCE.

SIMILARITY: BELONGS TO THE SRP FAMILY OF GTP-BINDING PROTEINS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          $79392; AAB35098.1;

Submitted (Nov-1995) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: TUBULIN IS THE MAJOR CONSTITUENT OF MICROTUBULES. IT

BINDS TWO MOLES OF GTP, ONE AT AN EXCHANGEABLE SITE ON THE BETA

-:- CHAIN AND ONE AT A NOWEKTHANGEABLE SITE ON THE ALPHA-CHAIN.

-!- SUBUNIT: DIMER OF ALPHA AND BETA CHAINS.

-!- SIMILARITY: BELONGS TO THE TUBULIN FAMILY.

Application US/08656177A

Patent No. 5882851

GENERAL INFORMATION:
APPLICANT: Koch, Birgit M.
APPLICANT: Albesen, Ole

APPLICANT: Moller, Birger L.
TITLE OF INVENTION: Cytochrome P-450 Monooxygenases

NUMBER OF SEQUENCES: 24

CORRESPONDENCE 3. 24

CORRESPONDENCE ADDRESS:
STREET: 3054 Cornwallis Road
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          COUNTRY: USA

                                                                                                                                                                                                                                                                                                                                                                       Sequence 8, Application US/08462467B

Patent No. 6210899

GENERAL INFORMATION:

APPLICANT: Rosenbaum, Jan S

TITLE OF INVENTION: Complex for Screening Bone Metabolism Actives and Cells TITLE OF INVENTION: Complex for Screening Bone Metabolism Actives and Cells TITLE OF INVENTION: Co-Transfected With a Type II BMP Receptor and a Type I TITLE OF INVENTION: BMP Receptor

TITLE OF INVENTION: BMP Receptor

NUMBER OF SEQUENCES: 39

CORRESPONDENCES: 39
